

It took a very skilled and knowledgeable CTO to develop the strategy, timing, approach, method and the exact technology to utilize when virtualizing and consolidating the Textile Company. In conclusion, cloud solutions can be found for any company as long as there are experienced cloud architects that assess the current infrastructure prior to any changes being made. These skilled cloud architects are able to provide companies with consultations and even be hired to execute the custom cloud solutions for each business.

This case study in particular illustrates that cloud solutions may not be on the top of every business's list of IT executions; however, if a company of any size wants to reduce their costs, eliminate excessive hardware, increase efficiency and grow beyond past limitations, then virtualization and consolidation are the best option available. 6DQDSSW will be happy to give your company a free assessment and provide your business with IT Consulting so that your business can save thousands or even millions of dollars just like the Textile Company.
